DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-2, 4-6, 8-13, 15-17, 19-21, 24-26, 28-29, and 31 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement.

The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The limitation of storing two links to a location on the storage medium wherein the data is stored in which the content key encryption key is encrypted by the enabling key block. It is further unclear what the purpose of the second link is.

Allowable Subject Matter

3. The following is a statement of reasons for the indication of allowable subject matter:

Maruyama discloses an information processing system for distributing encrypted message data with a receiving device (pages 20-21 par. [0020]), the device including, encryption processing means for holding a device specific set of a node keys associated with a node in a hierarchical tree structure with a plurality of different devices as leaves and a leaf key peculiar to each device (pages 14-15 par. [0011]) and executing decrypting process on said encrypted message data distributed to a device

Art Unit: 2134

using said key set (pages 20-21 par. [0020]), wherein a message data distributing means generates a renewal node key (page 21 par. [0021]) into which at least one of the node keys in a group constituted by nodes and leaves connected at subordinate of a top node which is one node of the hierarchical tree structure (pages 14-15 par. [0011]) is renewed and an enabling key block (EKB) into which said renewal node key is encrypted with a node key or a leaf key in said group (pages 20-21 par. [0020]), and generating and distributing a message data encrypted with said renewal node key (content, pages 20-21 par. [0020]) and a link to the renewal node key (pages 5 and 6, claims 2 and 4). Maruyama does not disclose storing two links to a location on the storage medium wherein the data is stored in which the content key encryption key is encrypted by the enabling key block. Adding this limitation to Maruyama would not have been obvious to one of ordinary skill in the art, since there is no motivation to do so.
